Pure and Simple

HF500 Automatic Portable Nitrogen Machine

The Niflate⁹⁹ Model HF500 automatic portable nitrogen machine is designed for facilities that want to profit from the rapidly growing nitrogen inflation business. It replaces air with the purest nitrogen available.

- Hands-free operation enables 1 to 4 tires to be purged and inflated automatically by the same technician providing other vehicle services.
- The exclusive ergonomic design of the heavy-duty cart makes it easier to use. In its stationary position the control panel is aligned with the technician's line-of-site for increased visibility. And, when it's moved around the shop, the weight is aligned over the wheels for increased stability.
- Two purge and inflation cycles are completed in only 7 to 12 minutes.
- It uses tanks of 99.9% pure, dry nitrogen available from local gas distributors.
- It's totally self-contained and can be moved easily for use anywhere... between service bays or to remote locations. It operates for hours on affordable power packs.
- User-friendly controls make it easy for anyone to set it up for any vehicle in 5 seconds.
- You avoid costly and time consuming installation. It's ready to use when shipped.
- The HF500 automatic nitrogen machine includes:
 - Ergonomically designed heavy-duty 2-wheel cart
 - Standard automatic hands-free controller and industrial regulator designed to inflate typical automobile and light-duty truck tires
 - Four 25ft. coiled reinforced polyurethane hoses
 - Marketing Kit
