Pure and Simple

MXT100 Nitrogen Gauge

The rule of thumb for inflating tires with nitrogen is the purer the nitrogen... the better the results. In fact industry experts agree that tires must contain nitrogen that is at least 96% pure for drivers to receive the benefits they expect. The MXT100 Nitrogen Gauge is the easy, reliable way to measure the purity of the nitrogen you install in customer tires. It's designed with features that makes it easier for your service technicians to use:

- It operates on 2 AA batteries that perform up to 5,000 hours with continued use and then are easy to replace. It can be used with lithium batteries for even longer life. Compare the MXT100 with sealed gauges that are designed to be discarded when batteries expire.
- Its contoured design fits securely within your hand to make it comfortable and easy-to-use.
- The large LCD displays nitrogen purity with an easy-to-read 3 digit display.
- The MXT100 Nitrogen Gauge includes:
 - Nitrogen gauge
 - 2 ft. polyurethane hose
 - Extended chuck
